Meta App Review answers

For the app “Orcas Prime Dashboarding”. Press Copy next to each item and paste it into the matching Meta field.

App ID `1103106575795206` Business ID `849797624837421` Permission `ads_read` (Advanced access)

Before you start

1. The privacy and data-deletion pages are live (checked). Open both once in a private window.
2. Fill the sections in this order: App settings, Allowed usage, Data handling, Reviewer instructions.
3. Submit. After approval, switch **Publish** to Live.

Items marked “confirm” are things only you can check. Meta compares your business name with your GST certificate, so make sure the name on the website matches it.

1. App settings

HOW WILL YOUR APP USE ADS_READ?

Copy

Orcas Prime is a marketing agency in Jaipur, India. Our clients are D2C e-commerce brands that run Meta ads. Each client shares its own ad account with our Business Manager as a partner. Our internal reporting system is assigned that ad account on a single system user with view-only access, and uses ads_read through that system user to read that ad account's performance data (spend, impressions, clicks, campaign / ad set / ad names, and purchase conversions). We combine it with the client's own store orders to compute true profit per campaign and show it in a private dashboard that only that client sees.

We use ads_read only to read reporting data for ad accounts whose owners have explicitly granted us access. We never create, edit or delete ads, never post, and never read data about individual Facebook or Instagram users.

WHY ADVANCED ACCESS INSTEAD OF STANDARD ACCESS?

Copy

Our clients' ad accounts belong to other businesses. Standard access only covers ad accounts owned by our own business, so we need advanced access to read the ad accounts that clients share with us.

IS YOUR APP USED BY PEOPLE OUTSIDE YOUR BUSINESS? (ONLY IF ASKED)

Copy

No. The app is not offered to the public and has no Facebook Login. It runs server-side as an internal tool, reading only the ad accounts that businesses have shared with Orcas Prime.

3. Data handling

Mark done

The form's wording changes, so match each Meta question to the nearest one below.

SHARE PLATFORM DATA WITH THIRD PARTIES (OTHER THAN SERVICE PROVIDERS)?

No.

Copy

SHARE IT WITH SERVICE PROVIDERS?

Yes. A managed database provider and a dedicated server host, both in the European Union, process it on our behalf under their standard terms.

Copy

WHERE IS IT STORED OR PROCESSED?

European Union (database in Frankfurt, server in Helsinki). Copy

SELL IT, OR USE IT TO ADVERTISE TO INDIVIDUALS?

No. Copy

USED FOR PROFILING OR DECISIONS ABOUT INDIVIDUALS?

No. The data is ad-account performance reporting, not user data. Copy

DOES THE APP RECEIVE PERSONAL DATA OF FACEBOOK OR INSTAGRAM USERS?

No. Only aggregated ad performance metrics for the ad account. Copy

HOW IS DATA PROTECTED?

Credentials are held in access-controlled systems and not in the reporting database. Access is limited by role, and dashboards are private to each client. Copy

HOW LONG DO YOU KEEP IT?

While the client engagement continues. Deleted within 30 days of the client's request or the end of the engagement. Copy

HOW CAN USERS REQUEST DELETION?

https://www.orcasprime.in/data-deletion, or by email to orcasprime@gmail.com. A client can also stop our access at once by removing Orcas Prime as a partner in Business Settings. Copy

DATA-PROTECTION CONTACT

orcasprime@gmail.com, +91 90018 33059 Copy

ANY DATA BREACH OR DATA-PROTECTION INVESTIGATION?

No. Copy

Confirm before you answer: the breach question is true as far as you know, and if the form asks for a

Confirm before you answer: the breach question is true as far as you know, and if the form asks for a named person, use a real one (do not invent a name). The 30-day deletion and “no sharing outside service providers” are public promises on the website, so only keep them if that is how you will operate.

4. Reviewer instructions

Mark done

Copy

This app does not have a user-facing login or a public UI. It is an internal server-side integration, so there is no "log in with Facebook" flow to test. It authenticates with a system user access token generated in the Orcas Prime Business Manager and calls the Marketing API from our own servers.

How the permission is used:
1. A client business shares one of its ad accounts with Orcas Prime's Business Manager as a partner, in Business Settings → Accounts → Ad accounts → Assign partners.
2. Our admin assigns that ad account to our system user with view-only access (View performance). The system user cannot change anything on the account.
3. A scheduled job calls GET /v21.0/act_/insights with fields=spend,impressions,clicks,campaign_name,adset_name,ad_name,actions, action_values and a daily time range. This call is the only use of ads_read.
4. The returned rows are stored per client and shown in that client's private dashboard next to their store orders, to calculate profit per campaign.

The attached screencast shows the full flow: the partner-shared ad account in Business Settings, the system user and its ads_read permission, the insights request and response, and the resulting dashboard with the ad-spend and profit cards.

Contact for questions during review: orcasprime@gmail.com

SCREENCAST, 1 TO 2 MINUTES, NO AUDIO NEEDED

1. **Business Settings → Ad accounts:** show a partner-shared client ad account listed under Orcas Prime.
2. **System users:** show the system user with that ad account assigned, and the `ads_read` permission on the token (open the generate-token screen, then cancel).
3. **One insights call:** show the request and the JSON response. Hide the token.
4. **The dashboard:** the Metabase Marketing & Ads tab with the ad-spend and POAS cards. Do not show the order tabs; one card lists customer phone numbers.

5. Finish on the privacy policy page with its address visible.

> Record this after the Savana test pull works with the new system user token, so the video shows fresh data.

Still to confirm

1. Orcas Prime's legal name and registered address. The website only says “Orcas Prime, Jaipur”. Make sure it matches the GST certificate used for business verification.
2. Business verification: the green tick in the review checklist is a strong sign. Also check Security Center → Business verification.
3. Whether `ads_read` already shows “Advanced access” under App Review → Permissions and Features.
